

How to Set up Dual Factor Authentication (DFA) for Smartphone

Dual Factor Authentication means you will be required to prove your identity to Office365 using two factors. The two factors are something you know (your password) and a way to verify your identity via a notification on your phone.

Note: Dual Factor Authentication will only work with the Outlook app. If you are using a different email app on your phone, please delete the email account and download the Outlook app.

To set up dual factor authentication with the app, you will need:

- Computer
- Smartphone
- Microsoft Authenticator app

©Microsoft Authenticator

1. Go to <http://you@otterbein.edu>

2. Enter in your Otterbein Email

- o Next.

3. You will be redirected to

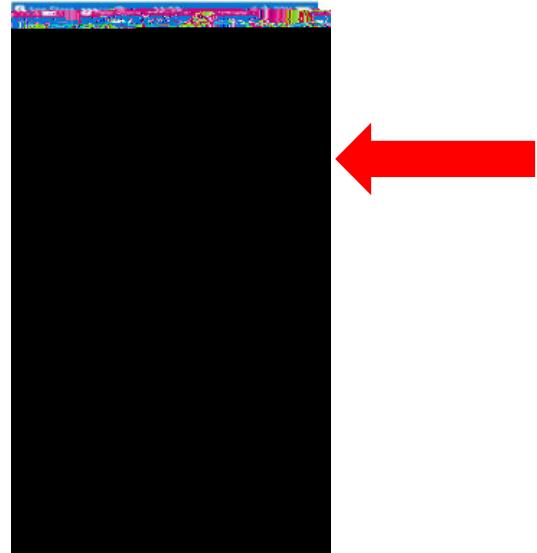

your.uotterbein.edu

5. Next  μ Á]o o •| š }
