

An EQSC 1400 series course is offered almost every semester and offers practical experience on a specific topic. Topics may vary by semester.

The May term is an optional 3-week long term during which you have a total immersion experience into just one course. Taking advantage of this opportunity may lighten your load during the regular semester and/or provide opportunities to take more electives. Courses are often offered at reduced tuition. There are also travel course options.

SYE courses are designed to help students bring together the learning done in majors, integrative studies courses and elective courses, allow for reflection on your college education, and provide a bridge to your future career, graduate school, or professional school.

Every summer, it is important that pre-veterinary medicine students who are interested in veterinary school involve themselves in a veterinary practice. Try to acquire many different types of veterinary practices: food animal, small animal, equine, exotics. Your references for vet school will be coming from veterinarians in these practices. Students interested in graduate school or other career options should look for research opportunities, internships, or relevant work opportunities.

: Please contact a faculty member if you think you might be interested in pursuing an undergraduate research project.
